FNU Job Placement

Student and Alumni User Manual

Approved students and alumni

Version 2.0 | 14 October 2026

Use the portal address supplied by FNU. This guide describes the current site; available actions depend on your account role.

Contents

1. Your first session
2. Find and save jobs
3. Submit an application
4. Track applications and give placement feedback
5. Account settings and security
6. Troubleshooting and support

1. Your first session

1. Complete registration, email verification, and approval as described in Quick Start and Navigation.

2. Login to Student Dashboard. Open your name menu > Account Settings > Profile Update.

3. Fill every required field: personal/contact/address details, college, education, skills, and other required profile information. Alumni should check their designation and graduation year.

4. Save and add a profile picture using Change Profile Picture. Follow the incomplete-profile and missing-picture notices until they are cleared.

Use the sidebar for Jobs Applied and Saved Jobs. Alumni share this workflow; they do not need a separate employer or staff account.

2. Find and save jobs

1. Open Find Jobs, search/filter vacancies, and open the job details.

2. Read requirements and closing date before applying. Select Save to bookmark an active job.

3. Open Saved Jobs from your student sidebar to revisit a vacancy. Use the remove action to delete an unwanted bookmark.

Saving does not submit an application or reserve a vacancy. Recheck job availability before applying.

3. Submit an application

1. Open the job details and select Apply. Prepare documents that match the advertised requirements.

2. Upload at least one document: application letter, resume, or certificate. Application letters and resumes accept PDF, DOC, or DOCX. Certificates also accept JPG, JPEG, and PNG.

3. Each file must be no larger than 5 MB. Use readable filenames and review each file before submitting.

4. Submit once, read the confirmation, then open Jobs Applied to verify the application exists. Submission starts at Submitted when that configured status is available.

You cannot submit a second application for the same job while your application exists. An email-delivery warning does not necessarily mean submission failed.

4. Track applications and give placement feedback

1. Open Jobs Applied to review your applications and current recruitment status. The job's active/inactive status is separate from your application status.

2. Review any available history/details and check your email for status-change notifications. Ask the Placement Officer about unclear decisions; students cannot change recruitment status.

3. Use the remove action only if you intend to remove that application; confirm the selected job before proceeding.

4. Once an application is marked Placed, use its action menu > Give Feedback. Choose a rating from 1 (Poor) to 5 (Excellent), optionally add comments (up to 2,000 characters), and submit.

Only one student feedback submission is allowed per placed application. Feedback Submitted indicates it already exists. Your company feedback is visible to administrators, not directly to the employer.

5. Account settings and security

1. Open your name menu > Account Settings. View Profile shows your saved information; Profile Update opens the editable fields.

2. Update your own details, select the save/update button, and check the confirmation. Correct any errors shown beside fields.

3. Use Change Profile Picture to upload a clear picture. Use Change Password to enter your current password, new password, and confirmation.

If your account requires email verification, changing your primary email requires verification of the new address before continuing.

Use a unique password, keep applicant documents confidential, and select your name > Logout on shared devices. Never share a login.

6. Troubleshooting and support

Pending approval: contact the Placement Officer if approval is delayed. Email verification and administrator approval are separate requirements.

Blocked account: contact an administrator; registering again is not a solution. Unverified email: use the verification/resend link on Login and check your spam folder.

Forgotten password: self-service recovery is not implemented in this version. Ask an administrator to reset a student/employer password, or a super administrator to reset a staff password. Arrange the replacement privately.

Read submission messages carefully. A notification-email warning may mean the record was saved but the email failed; check the saved record before submitting again.

Use Contact Us to reach the Placement Officer. Include the page, action, time, and error message, but never send your password or unnecessary personal documents.
