

CIN623 Database Design and Programming

Trimester 2 - 2018

Lab Exercise on SQL

Refer to the STOCK table given below to answer the following questions:

Code_Number	Item_Name	Type	Quantity	Unit_Price
100	Goat Meat	Frozen Item	25kg	\$15.00/kg
101	Corned Mutton	Tin Stuff	10 boxes	\$3.70
102	Burnswick Mackerel	Tin Stuff	5 boxes	\$2.35
103	Canola Oil 5Litre	Food Item	120 Gallons	\$15.50
104	Lamb Chops	Frozen Item	50kg	\$12.00/kg
105	Crest chicken #15	Frozen Item	20 Packets	\$11.55
106	Johnsons Baby Oil	Baby Section	10 boxes	\$3.95ea
107	Johnsons Baby Powder	Baby Section	12 boxes	\$4.95ea
108	Coke 2Litre Bottle	Beverages	25 Crates	\$2.85/bottle
109	Sprite 2Litre Bottle	Beverages	15 Crates	\$2.75/bottle
110	Fiji Gold	Alcoholic Bever	100 Cartons	\$42.00/carton
111	Fiji Premium	Alcoholic Bever	75 Cartons	\$52.00/carton

1. Create table shown above using SQL.
2. Write a SQL command to add the following set of data into the “stock table”

Code_Number	Item_Name	Type	Quantity	Unit_Price
112	Potatoes	Food Item	15 Bags	\$1.55
113	Bleach	Household Item	50 Gallons	\$3.25

3. Write a SQL command to change the Quantity of the stock, **Code_Number 109** to **20 crates**.
4. Write a SQL command to delete all stocks with the type '**Frozen Item**'.
5. Write a SQL command to display the stock details for those stocks with **Unit_Price** between \$3.95 and \$11.55.
6. Write a SQL command to list all stocks which are considered as **Tin Stuff** or **Baby Section**
7. Write a SQL command to produce a list of **Unit_Price** for all stocks, arranged in **descending** order of Unit_Price.
8. Write a SQL command to list all items whose **Item_Name** begins with **C** and **Unit_Price** greater than **\$5.00** and state the resulting output in tabular form.
