

CIN628 Internet and Web Programming
Trimester 3 – 2018
Lab 1

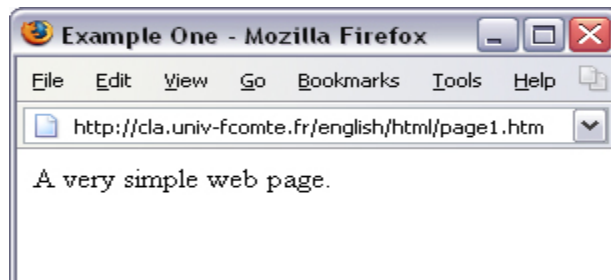

Reference:

- HTML: <http://www.w3schools.com/>

Part A: Use the following elements to create your very first web page

```
<html>
<head>
  <title>Example One</title>
</head>
<body>
  A very simple web page.
</body>
</html>
```

Here is A very simple web page in a browser:

Part B: W3Schools: <https://www.w3schools.com/html/>

Go to the above site and go through the tutorial on the following topics:

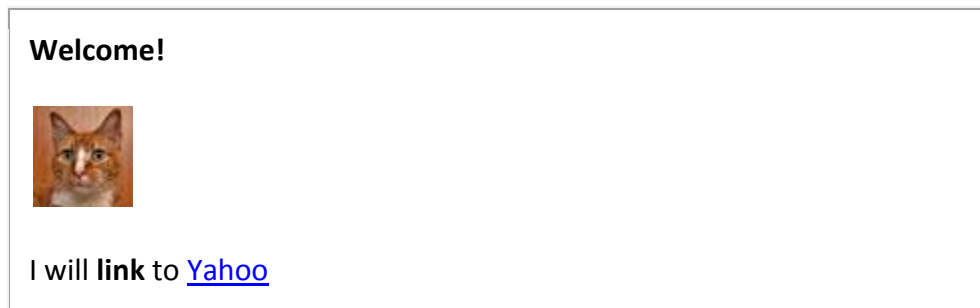

- HTML Home
- HTML Introduction
- HTML Editors
- HTML Basic
- HTML Elements
- HTML Attributes
- HTML Headings
- HTML Paragraphs
- HTML Styles
- HTML Formatting

- HTML Quotations
- HTML Comments
- HTML Colors

Part C: Building a Basic Web Page

First, right-click on the picture of this cat below and save it to a folder on your computer so you can use it as an image on your web page.

When finished creating the html file, save your source document with the **.html** file extension. The document and the cat's picture must be in the same folder.

Required Tags in the Example

- The source document's text and codes go between the **<html>** opening tag and the **</html>** closing tag. An HTML source document contains two sections: Head and Body.
- The Head section (with the **<head>** and **</head>** tags) contains your title for the top of the browser. Type your title's name between the **<title>** and **</title>** tags.
- The contents of the Body section go between the **<body>** and **</body>** tags.

Other Tags in the Example

- The image tag needs source, width, height and alt (description) attributes: ****. The image element and a few others do not have closing tags.
- **<p>** starts a paragraph, and **</p>** ends it.
- Text between **** and **** appears in bold type.
- **Yahoo** links this page to Yahoo.com. To link to a second page on your own site, use the attribute **href="page2.htm"**. The **a** tag stands for anchor. The word Yahoo between the anchor tag and its closing is set as a hyperlink.
