Trimester 3 – 2018

Lab 3

XHTML Validation

The *correctness of XHTML code* is **verified** using an XHTML Validation Service, such as W3C's XHTML Validation Service (<http://validator.w3.org/>).

An **XHTML document** is **validated** against a DTD and **the set of XHTML syntax rules** that is identified below:

XHTML Syntax Rules

- The XHTML DTD defines mandatory elements
- Tag names must be in lowercase
- Attribute names must be in lower case
- Attribute values must be quoted
- The id attribute replaces the name attribute
- XHTML elements must be properly nested
- All XHTML elements must be closed

Exercise 1: XHTML Validation under a given DTD

Figure 1 on page 2 shows an **incorrectly** written **XHTML 1.0 document** under the Transitional DTD that is to be corrected.

Instructions:

1. Use the **Source Code** provided in **Figure 1** and **save** it into a file, as **"invalid.xhtml"**.
2. **Open** the **W3C HTML Validation Service** available at <http://validator.w3.org>.
3. **Check for Validation** by :
 - Direct Input of code or
 - File Upload of invalid.xhtml
4. **View** the **errors listed** from **validation** and **update/modify** your code in **invalid.xhtml** to eliminate these errors, and **save the changes made**.
5. Check again for validation after fixing these errors by the methods shown in Step 3.
6. **Repeat Steps 5-6** until your code fully passes validation.
7. **Once your document is fully validated, save** the document as **"valid.xhtml"**.
8. View **valid.xhtml** in **browser** to see the emerging XHTML document after corrections. Your **validated XHTML** should look like **Figure 2**. *Note that you can crop the image from Figure 2 and include in your site.*

```

<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">

<!-- //transitional DTD -->

<html xmlns="http://www.w3.org/1999/xhtml" xml:lang="en">

<head>
<title>
    XHTML Validation Example &minus; Valid
</title>
<meta http-equiv="Content-Type" content="text/html;
charset=iso-8859-1" />
</head>

<body BGCOLOR=#CFCFF0>
<h1 align = CENTER> <u>Core Web Fonts</U></h1>
    <font FACE="Times New Roman">
        <h4 align = CENTER>This is Times New Roman</h4></font>
    <font FACE="Courier New">
        <h4 align = CENTER>This is Courier New</h4></font>
    <font FACE="Arial">
        <h4 align = CENTER>This is Arial</H4></font>

This is a XHTML validation test<br>
This is the <i><b>valid</i></b> code output of
<b>invalid.xhtml</b><br>
Try <a href="http://validator.w3.org/#validate_by_upload">this
validation service.

<br>(<B>select and copy</B> either the <B>source
code</B> or <B>URL</B> for this page - so that you
can paste it into the website.)

<br><br>

</body>

```
