FNU Job Placement

# Employer User Manual

Approved employer contacts

Version 2.0 | 14 October 2026

Use the portal address supplied by FNU. This guide describes the current site; available actions depend on your account role.

## Contents

1. Your organization and first session
2. Create a job
3. Maintain your jobs
4. Review applicants and update decisions
5. Give feedback on a placed student
6. Account settings and security
7. Troubleshooting and support

# 1. Your organization and first session

1. Register, verify your email, and wait for contact approval. A new organization request must be resolved and linked first.

2. Login to Employer Dashboard. Use Create Job, My Jobs, Review Applications, and My Organization in the sidebar.

3. Open My Organization to check the shared company details. Ask an administrator to correct them; you cannot edit shared organization information or switch organizations yourself.

Multiple contacts can belong to one organization. Your jobs and application access remain tied to your own contact login, not all contacts in the organization.

## 2. Create a job

1. Select Create Job. Choose the appropriate college/category and job type. Enter title, vacancy count, location, description, and experience.

2. Provide closing date, salary, responsibilities, qualifications, and keywords where applicable. Company details come from your linked organization.

3. Review and submit. New employer jobs are saved as pending for administrator approval; they are not immediately public.

4. Check My Jobs and wait for approval. If the Placement Officer email fails, the job is still saved; contact the officer rather than creating a duplicate.

## 3. Maintain your jobs

1. Open My Jobs. Search and use sortable headings/pagination to locate a posting.

2. Use Edit to correct your own job, save, and review the result and status.

3. Use Block to hide an available posting when appropriate. Where Unblock is available, it returns your blocked job to active; check the resulting status.

4. Employers cannot delete jobs. Ask an administrator if a posting must be removed; use Block when it should simply stop being public.

You cannot edit or manage another contact's jobs, including other contacts in your organization.

## 4. Review applicants and update decisions

1. Open Review Applications. Search by job, company, applicant, or email and filter by status. Only applications to jobs you own are available.

2. Open the applicant profile and permitted application letter, resume, or certificate downloads. Treat documents as confidential.

3. Review the current status and history. Select the appropriate status from the dropdown and confirm the change only after a recruitment decision.

4. The change is saved to history and an applicant email is attempted. An unchanged status sends no new email; a delivery warning leaves the change saved.

You cannot delete applications. Contact the Placement Officer for corrections you cannot perform.

## 5. Give feedback on a placed student

1. In Review Applications, locate an application marked Placed for your job.

2. Use Give Feedback where available. Select a rating from 1 (Poor) to 5 (Excellent) and optionally add comments (up to 2,000 characters).

3. Submit once. Feedback Submitted means feedback already exists for that application.

Feedback is visible to administrators and is not shared directly with the student. Student feedback about your company is not directly visible to you.

# 6. Account settings and security

1. Open your name menu > Account Settings. View Profile shows your saved information; Profile Update opens the editable fields.

2. Update your own details, select the save/update button, and check the confirmation. Correct any errors shown beside fields.

3. Use Change Profile Picture to upload a clear picture. Use Change Password to enter your current password, new password, and confirmation.

If your account requires email verification, changing your primary email requires verification of the new address before continuing.

Use a unique password, keep applicant documents confidential, and select your name > Logout on shared devices. Never share a login.

# 7. Troubleshooting and support

Pending approval: contact the Placement Officer if approval is delayed. Email verification and administrator approval are separate requirements.

Blocked account: contact an administrator; registering again is not a solution. Unverified email: use the verification/resend link on Login and check your spam folder.

Forgotten password: select Forgot Password on Login, enter your account email, and select Send reset link. Check your inbox and spam folder. Open the single-use link within 60 minutes and enter a new password of at least 8 characters twice. Wait at least one minute between link requests. Resetting a password does not approve or unblock an account or verify its email. If email recovery is unavailable, contact an administrator for student/employer accounts or a super administrator for staff accounts.

Read submission messages carefully. A notification-email warning may mean the record was saved but the email failed; check the saved record before submitting again.

Use Contact Us to reach the Placement Officer. Include the page, action, time, and error message, but never send your password or unnecessary personal documents.
